MDV2799	Building Foundations at Hope Cove	Monument
Foundations of rough buildings with indications of smelting near Hope Cove.		

Monument Types and Dates

BUILDING (Unknown date)

Evidence DEMOLISHED BUILDING

Description and Sources

Description

Article in Serial. Winder, T., 1923, Archaeological remains at Hope Cove near Kingsbridge, South Devon
Building foundations were found on the shore at Inner Hope, about 36.5 metres north of the slipway and 2.44m below high water mark. One is circular in plan, 1.83 metres diameter, the other about 6m square. Indication of smelting, some slag, and a worked flint were found amongst the foundations.

Ground Photograph. Trenear-Harvey, C., 2017, Building Foundations at Hope Cove
Photos showing the foundations of the rectangular and circular buildings at Hope Cove.

PARISH CHURCH ((Between) XII to XVI - 1200 AD to 1600 AD)

Evidence CARTOGRAPHIC EVIDENCE

Description and Sources

Description

Leaflet. Hoskins, Canon,
Guide leaflet obtainable at South Huish Farm.

Cartographic. Ordnance Survey, 1880-1899, First Edition Ordnance 25 inch map
'St Andrew's Church (In Ruins)' shown on 19th century map to the south of Court Barton.

Monograph. Kelly's Directories Limited, 1902-1906,

Article in Serial. Clarke, K. M., 1922 - 1923, Porch Fireplaces in Devon Churches
There was a fireplace in the south porch whose purpose was probably ritualistic. It is now ruinous.

Ordnance Survey Archaeology Division Card. Ordnance Survey Archaeology Division, 1950 - 1986, SX64SE10
Remains of St Andrew's church. Site visited on 2 nd October 1986. The building has long been roofless and it was overgrown with ivy and scrub. Work has been undertaken to clear the vegetation, consolidate the walling and partially restore the fabric. The majority of the window tracery has gone, part of the structure is in danger of collapse, however, the main part of the building can be described as being in a graceful state of decay. Church services are occasionally held in the nave.

Monograph. Hoskins, W. G., 1954, A New Survey of England: Devon
Brief history given, including details of 19th century dismantling of church and dispersal of fittings.

List of Blds of Arch or Historic Interest. Department of Environment, 1960, Kingsbridge RD
St Andrew's church in ruins. Early Medieval. Scheduled Monument Consent granted for restoring mullion and tracery, excavating to expose column bases and blocking entrance to tower stair.

Correspondence. Department of Environment, 1988,

Schedule Document. Ministry of Works, 1988, St Andrew's Church
Roofless, tower split, likely to fall soon. Walls much overgrown. Nave and tower 13th century, north transept and south aisle 14th century. Chancel has two lancet windows with wide splays. Also two lancet windows on north side of nave. Porch built flush with south wall contains two stone seats, east and west, stoup in eastern wall and fireplace in western wall. Image bracket over door. A piscina in excellent preservation in the chancel. Traces of former lancet window above door, built up when porch was built. Remains of stone wall bench along north side of transept. Heads of transept windows entirely gone. One window, fairly perfect in south aisle, east end, decorated style. Nearly all tracery has left windows. Other details: Monument 11.

Personal Comment. Timms, S. C., 1988,
Site visited on 25th April 1988. Church and yard leased to Friends of Friendless Churches. Fabric is in good condition with signs of recent repair. Walls clear of vegetation. Modern altar erected in 1985

Monograph. Cherry, B. + Pevsner, N., 1989, The Buildings of England: Devon

Article in Serial. Collins, L., 1990, Walking the churchyards
Memorial inscriptions were recorded in 1989. 54 were visible and 46 were legible.

Article in Serial. Allan, J., 2001, An Angel from Pinhoe and other Medieval English Alabasters in Devon
Partial dismantling of the church was undertaken in 1866-7.

Cartographic. Ordnance Survey, 2010, MasterMap
'St Andrew's Church (remains of)' shown on modern mapping.

Personal Comment. Richards, A., 2010,
This feature is no longer a Scheduled Ancient Monument. No scheduling or descheduling documents are held by the Historic Environment Service.

List of Blds of Arch or Historic Interest. English Heritage, 2010, Historic Houses Register

Ruins of Church of St Andrew in South Huish was Listed on 26th January 1967. Ruined parish church of the 13th to 15th centuries and abandoned in 1866. Slatestone rubble walls. Plan: nave and chancel are the oldest parts to which a 14th century tower was added at the west end, and the north transept possibly at the same time. In the 15th century a south aisle and porch were built. In 1866 the Vicar of West Alvington with its dependent chapels decided that the church was not worth restoration. All its fittings were sold, including the Medieval screen which was taken to Bowringsleigh House in West Alvington. The arcade to the south aisle was removed to Dodbrooke church in the early 20th century. Exterior: the church is now roofless but the walls are largely intact although less so to the transept. The stonework of the west tower is much eroded, it has a blocked 15th century four-centred arched west doorway with mutilated Perpendicular window above. On the north wall of the nave is a 13th century lancet opening with the framework gone. The chancel has two similar windows, that on the south side opening into the aisle and still with its stone framework. Granite Perpendicular windows to south aisle end at east end of church. Single storey south porch with dressed rubble round headed doorway of South Hams type. Inner south doorway has four-centred chamfered stone head which blocks a former window opening in that wall. Internally the church has been completely stripped and has few features. Other details: LBS Number 100800.

National Monuments Record Database. National Monuments Record, 2010, 441071

Ruins of the Church of Saint Andrew. The nave and chancel are 13th century, to which a 14th century tower was added at the West end, and the North transept probably at the same time. A South aisle and porch were added in the 15th century.

At cross roads a short distance south of south huish farm, about 1/2km west of the ruined parish church. It stands in an orchard on top of a tall roadside bank overlooking what is said to be its original site in the centre of the crossroads. Type b-c. A massive cross of octagonal section mounted on a modern roughly triangular base. The head and arms expand slightly outwards. The base bears an inscription illegible except for the date 1911. The cross is said to have been discovered in use as a gatepost near the lane to the coast (masson phillips). Vis=25/4/1988 (timms). Cross still in situ. Vis=14/8/1986 (os). This impressive granite latin cross is 1.5m high and the limbs extend to 0.75m; the crude base is ivy covered. Two blocked holes on one side of the shaft probably mark the former positions of the gate hangers.(os).

Article in Serial. Worth, R. H., 1902, 21st Report of the Barrow Committee

Bolt Down. Between Red Throat Cove and the Bolt Tail, there are possibly three barrows, apparently all opened before 1885 at the latest. The grid reference presumes that Red Throat Cove is now Redrot Cove.

Ordnance Survey Archaeology Division Card. Ordnance Survey Archaeology Division, 1978, SX63NE2

Between Red Throat Cove (Redcot ?0 and the Bolt Tail is a barrow having a large pit in the top as if it had been opened or used as a 'Watch Station'.

Aerial Photograph. National Monuments Record, 1979, SF 1457

Aerial photo shows site well, but barrows not clearly identifiable.

Article in Serial. Grinsell, L. V., 1983, The Barrows of South and East Devon

Visited by Miles in March 1976 when the area was under grass and brambles with nothing visible.

Plan - measured. Royal Commission on the Historical Monuments of England, 1987,

Scaled plan of Bolt Tail Promontory Fort showing several possible barrow sites.

Report - Survey. Thackray, C., 1990, Archaeological Survey of the Salcombe Estuary: West (Bolt Head to Bolt Tail and Snapes Point) Devon

These burial mounds were not convincingly identified as such during a recent field visit, and it is possible that they are no more than natural rock outcrops.

Schedule Document. Department for Culture, Media and Sport, 2001, Iron Age Cliff Castle Known As Bolt Tail Camp

This feature is within the Scheduled area of Bolt Tail Camp but not mentioned in the Description of the Monument. Other details: Monument 33761.

National Monuments Record Database. National Monuments Record, 2011, 440921

Group of mounds at Bolt Tail some or all of which may be natural. Three apparently substantial mounds are depicted on the Ordnance Survey 2 inch drawing (No21) dated 1803-4, between Redrot and Bolt Tail, all within the area enclosed by the promontory fort. Mound A, towards the northern cliffs of the promontory, is at SX66993975; two, on the opposite, southern cliffs, are Mound B at SX66933955 and Mound C at SX66893957.

Mound A: depicted at approximately SX66953975 exists on the ground as a substantial natural rocky outcrop covered by a dense layer of gorse and bramble. Not a sepulchral cairn and no evidence of any other mound was identified close by.

Mound B: the approximate site of the second mound at SX 66933955 occurs at a point where there has been extensive cliff-top erosion. It seems probable that this feature has fallen into the sea, certainly no other mound was identified closeby, its precise nature is not now ascertainable.

Mound C: the approximate position of the third mound at SX66893957 is matched more or less by a probable round barrow at SX66863958. This, about 14.0 metres across, is up to 1.8 metres high on the downhill (north) side and 0.4 metres high on the south side. It is apparently composed of soil and stone although living rock protrudes from two places; the sloping top may have been disturbed but there is no evidence of a pit or excavation spoil. It occupies a prominent high point and may be the "lofty barrow" recorded by Worth.

Mound D: a small rather elongated mound, which may be natural was found north west of this, the probable barrow, at SX66753962. it measures approximately 11.2 metres by 8.2 metres, 0.8 metres high on the downhill side and 0.5 metres high on the uphill side. There are traces of living rock in the predominately earthier feature but no trace of disturbance.

All these features occur within the enclosed area of Bolt Tail promontory fort.

Description and Sources

Description

Ground Photograph. Fox, A., Bolt Tail Camp

Photo and negative of Bolt Tail Hillfort from the Aileen Fox Collection. Other details: Photo + negative.

Monograph. Hawkins, A., 1819,

Article in Serial. Elliott, E. A. S., 1901, On Some Earthworks in the South Hams Probably Concerned in the Irishmen's Raid
Huge rampart of earth and stone. Entrance clearly marked. Points south-south-east. Camp is about 12 acres in area.

Article in Monograph. Wall, J. C., 1906, Ancient Earthworks

A headland jutting out on the west side of the most southern extremity of the County is fortified in two places. The first is an entrenchment 900 feet long across the narrowest part of the promontory. The rampart 20 feet thick at the base and in places 16 feet high is walled 4 feet in height on its outer face. It is approached from a sweeping dip in the ground, well covered by the missiles of the defenders. Entrance is formed obliquely by the incurved ends of the ramparts which widens on right hand side. An advance outwork of stone in the form of an arc is upon a mound 13 feet high and 53 feet long to the right of the entrance and commands a hollow which has the appearance of having been a sunk road to a subsidiary entrenchment on a lower level. This secondary stronghold is on a minor promontory facing Bigbury Bay and the entrance to a stream which empties itself at this point and provided fresh water to the garrison. A rampart 9 feet high commences on the low ground at the south-east and continues a straight course north-west where another small rampart on the edge of the cliff forms the exit which emerges on the sunk path leading to the stronger camp mentioned above. This smaller area is overlooked by the rising ground inland, but it provided a protected connection with the drinking supply and also with the boats in the bay until the defenders might possibly have to fall back on the fort above.

Article in Serial. Chater, A. G., 1909, Earthworks of the hill-spur type

Position depends upon natural strength for defence, and only partly upon artificial works of landward rampart and ditch.

Schedule Document. Office of Works, 1922, Bolt Tail Camp

A typical earthwork of the 'Promontory Fortress' class (Class A Congress of Archaeological Societies 1903. See Victoria History of Devon page 573) A strong vallum, 16 feet at highest point, with no fosse, cuts off the head-land of Bolt Tail. Entrance in centre, inturned. The path from Hope Cove has been slightly scarped, average height 6 feet, as slight protection against sudden assault from the cove. There is a second still slighter escarpment 2-3 feet high, starting from its south-east corner. Possibly modern or Medieval shelter or protection for look-outs. As the land is untillable, the monument seems in no danger from man, but rabbits are wearing away the rampart badly. Other details: Maps, notes.

Scheduled Monument Consent granted for stabilisation and repair works.

Report - Survey. Thackray, C., 1990, Archaeological Survey of the Salcombe Estuary: West (Bolt Head to Bolt Tail and Snapes Point) Devon

There is serious erosion on the south end of the main ramparts, where the coastal footpath has cut a scarp up and over the rampart to avoid the cliff-slumping which has removed its end. This erosion worsened considerably during 1988-89. Damage has been exacerbated by sheep sheltering. There is a further small area of erosion at the northern seaward end of the rampart.

Report - Watching Brief. Blaylock, S. R., 1996, Footpath Repair and Archaeological Watching Brief, Bolt Tail Promontory Fort, Malborough, Devon, 1995.

Monograph. Fox, A., 1996, Prehistoric Hillforts in Devon

Schedule Document. Department for Culture, Media and Sport, 2001, Iron Age Cliff Castle Known As Bolt Tail Camp
Iron Age cliff castle known as Bolt Tail Camp located on a high rocky headland above the English Channel. There are dramatic views in all directions for many miles. A narrow but deep dry valley lies immediately east of the fort, making it a very prominent feature in the local landscape. The monument survives as a large rampart, cutting off the headland and enclosing an area of 300 metres by 350 metres. The rampart is 260 metres long but was originally longer, the sea having washed away its terminals. It slopes from 61 metres above sea level at its south end, down to 22 metres at its north end. A bank of earth and stones forms the rampart, which is about 11 metres wide. It rises between 0.7 metres and 2 metres from the interior and falls between 3 metres and 5 metres to the outer ditch. An intermittent random drystone wall about 1.5 metres high revets the front of the rampart, but is probably of 19th century date, although fragments of an earlier revetment of coursed rubble are visible high on its outer face. The outer ditch is about 8 metres wide by between 0.4 metres and 0.7 metres deep. About halfway along, the rampart curves to the east around and over a natural outcrop of rock. Where this is cut by the ditch, it is 2 metres wide and 0.7 metres deep with a post-medieval field wall running along its east side. Immediately to the south, the only original entrance in the rampart has inturned flanking horns. These are short and composed of earth and stones. They are between 6 metres and 8 metres wide, rapidly tailing off in height from the outer rampart which rises up to 2 metres from the interior at this point. Outside the rampart towards the north end of the valley to its east is a second very large ditch, between 15 metres and 34 metres from the outer edge of the main rampart. It is 30 metres wide by about 5 metres deep at its north end, and 23 metres wide by about 2 metres deep at its south end. It is likely that this was a natural valley made more abrupt by building up its sides. Its southern half survives as a buried feature. The south end of the rampart is heavily disturbed by surface erosion and cliff falls, but an earthwork bank about 8 metres wide by 2 metres high continues along the cliff edge 60 metres to the south-east before heading east-north-east for a further 150 metres. An outer ditch on its north side is represented by a narrow terrace up to 4 metres wide. From the north end of the rampart, a second boundary work projects to the east. This has a bank 4 metres wide, rising 0.4 metres on its south side and falling from 1 metre to 2.5 metres to a ditch 4 metres wide and up to 1 metre deep. An upcast bank is 0.6 metres high and 1.5 metres wide. The rampart runs along the cliff edge before climbing the coastal slope to the east. At a point 150 metres east of the fort rampart, it levels out and terminates. At this point it is strengthened by an outer ditch which now survives as a terrace 4 metres wide and about 70 metres long. A second rampart begins here, immediately south of the first, continuing for 150 metres along the hillside to the south-east. Here it survives as a terrace 2 metres wide, falling 2.5 metres to a ditch 1.5 metres wide and up to 0.3 metres deep. An

upcast bank is 1 metre wide and falls a further 1.5 metres to the natural hillside. The rampart survives for a further 120 metres forming the rear boundary of gardens on the south side of Inner Hope village, but owing to its poor survival, this section is not included in the scheduling. Other features may be hidden under the bracken and scrub woodland which covers parts of the site. Despite some coastal erosion Bolt Tail Camp is well preserved. It is the only cliff castle known in South Devon and will retain information relating to its construction and use. Stratified deposits are likely to survive in the ditches and within the ramparts, while the gateway with its inturned rampart terminals may preserve traces of the gate structure. Two boundary works projecting outside the rampart are a rare feature. Other details: Monument 33761.

Article in Serial. Griffith, F. M. + Wilkes, E. M., 2006, The Land Named from the Sea? Coastal Archaeology and Place-names of Bigbury Bay, Devon

Bolt Head and Bolt Tail are not recorded as names until the 16th and 18th centuries but 'Boltesberie' and 'Boteberie' are recorded in Domesday Book. The Bolt may have been a stretch of high coast land, as viewed from the sea, between Bolt Head to Bolt Tail. The presence of a high ground enclosure appears to be a key component of an Iron Age trading point. The fort is barely visible from the sea but has a strong impact when approached from inland. The entrance way may be intentionally aligned to give a view of Burgh Island to the north.

Report - non-specific. English Heritage, 2009, Heritage at Risk Register 2009: South West
Generally unsatisfactory with major localised problems. Principal vulnerability plant growth.

National Monuments Record Database. National Monuments Record, 2009, 440918
The earthwork remains of an Iron Age promontory fort or hillfort and annexe. The headland of Bolt Tail is occupied by an Iron Age promontory fort of about 4.9 hectares, defended by a rampart 274 metres long and up to 4.6 metres high, with indications of a stone facing wall up to 4 feet high on its outer eastern side. The well-marked inturned entrance is approached by a hollow-way and guarded on the north by an arc-like outwork of stone, with a mound some 13 feet high by 53 feet long. The hollow-way from the gate leads to a minor fortification on lower ground, where a small promontory facing north to Bigbury Bay is cut off by line of rampart running north-west to south-east, and about 2.7 metres high. There is an entrance near the cliff-edge on the north-west. This camp seems to have been an annexe for the larger fort, sited to guard a fresh-water supply and observe Hope Cove below. Other details: SX63NE 1.

Report - non-specific. English Heritage, 2010, Heritage at Risk Register 2010: South West

Report - non-specific. English Heritage, 2011, Heritage at Risk Register 2011: South West
Generally unsatisfactory with major localised problems. Declining. Principal vulnerability plant growth.

Article in Serial. Griffith, F. M. + Wilkes, E. M., 2011, In the Footsteps of Pioneering Women; Some Recent Work on Devon Hillforts

Interpretation. Hegarty, C. + Knight, S. + Sims, R., 2013-2014, South Devon Coast Rapid Coastal Zone Assessment Survey National Mapping Programme Project

The rampart bank and outer ditches of the promontory fort are visible as earthworks on aerial photographs of the 1940s onwards and digital images derived from Lidar data captured in 2007, and have been transcribed as part of the survey. It is not possible to assess the condition of the earthworks in detail from the aerial photographs alone, but it appears that by 2007 the in-turned ramparts flanking the entrance at circa SX670396 are suffering from severe erosion on the internal, north-western sides. By 2012 the erosion is less apparent but the ramparts and adjacent ditch appears more overgrown.

HER Monument ID	Site Name	Record Type
MDV7224	Burleigh Dolts, South Huish	Monument

Iron Age hillfort comprising three semi-concentric enclosures, partly preserved in later hedgebanks, surrounding a small ovoid central enclosure, now largely levelled. Despite this the hillfort survives well. Geophysical survey showed that the subsurface remains of the hillfort's ditch circuits appear intact and a number of internal features within the hillfort were also recorded.

Monument Types and Dates

HILLFORT ((Between) Early Iron Age to World War II - 700 BC to 1945 AD)

Evidence EARTHWORK

Description and Sources

Description

Unattributed Sites and Monuments Register Entry. Unattributed Sites and Monuments Register Entry
Burleigh Dolts Camp. A portion of the inner vallum only remains. When the surrounding fields are not tilled the outlines of a very large camp can be traced. Bailey's Dictionary, 1745, gives Burley, big, havey and doke, a ditch or furrow. The fields were probably enclosed when the camp was known as The Castle. Destroyed by farmer in 1949 when levelling a field.

Cartographic. Unknown, 1840, South Huish
Field No. 578.

Article in Serial. Elliott, E. A. S., 1901, On Some Earthworks in the South Hams Probably Concerned in the Irishmen's Raid Rampart and ditch. Only the faintest line of the outer rampart is visible.

Article in Serial. Amery, P. F. S., 1901-1902, Burleigh Dolts
Two short notes on field names in the vicinity and their use in locating prehistoric sites.

Article in Monograph. Wall, J. C., 1906, Ancient Earthworks
Other details: Plan.

Schedule Document. Office of Works, 1922, Burleigh Dolts
Close to the village of malborough on the slope of a hill declining towards Burleigh-Newhouse Farm. Quadrangular earthwork with rounded corners. Only south fosse and rampart in good condition now and the south-east corner has quite lately been altered in contour in order to repair a modern fence. Traces of the western fosse are as shown on the 6 inch Ordnance Survey map but the eastern side is invisible. A modern hedge may mark the line. According to A. Hawkin's 'Kingsbridge and Salcombe', 1819, 'only the faintest outline of an outer rampart can be traced but a very thick bank at the north-east end seems to suggest this was a portion and here the entrance evidently was in plain view of Stanborough'. In 1789 a silver coin of Charles I was found. Possibly it may have been re-occupied then.
[An additional handwritten note on the schedule document states that it was ploughed down and destroyed by bulldozer in April 1950.]

Aerial Photograph. Royal Air Force, 1946, CPE/UK 1890

Article in Serial. Fox, A., 1951, Eighteenth Report on the Archaeology and Early History of Devon

Un-published. Silvester, R. J., 1980,

Un-published. Robinson, R., 1984, List of Field Monument Warden Visits 1984
Site visit by Department of Environment Field Monument Warden on 17th January 1984.

Ordnance Survey Archaeology Division Card. Ordnance Survey Archaeology Division, 1987 - 2001, SX74SW16
Site visit 7th November 1952. A hillfort. Bulldozed flat in 1949. No slopes now exist.
Air photographs suggest two outer ramparts to the south and south-west, the outermost one extending along the north-west side (citing Royal Air Force photograph of 1946).
Burleigh Dolts or Malborough Camp (listed as a simple defensive enclosure) is on the slope of a hill declining towards burleigh - newhouse farm. The area, irregular oval in shape, is surrounded by a strong bank. Around the lower level towards the north there is a rampart only, but from the east around to the south, where it reaches its highest point, the bank, 14 feet high and 20 feet wide at the base, is accompanied by a wide ditch. The entrance at the south-west was well guarded the western bank having been extended in a curve hugging the termination of the southern rampart and ditch. There are faint traces of an outer rampart on the side of the hill (citing Wall).
The interior of the hillfort is named 'Castle Park' on the Tithe Award and the upstanding features are depicted on the Tithe Map (citing Tithe Map).
Burleigh Dolts lies astride a north-south ridge and it sits just below the crest overlooking a saddle to the north and a valley to

the west. It is vulnerable on all but the north-west side. Its south and east defences were deliberately destroyed in 1950 and the earthworks of the north-west side alone survive; here the bank stands to a height of 3.5 metres above the terrace which reveals the position of the outer ditch. On the north-east the defences have been eroded by agriculture over a long period, the bank scarp does not now line up with the surviving rampart although further south this scarp changes to a bank with a slight outer ditch. The bank on the southern side was pushed into the ditch by the bulldozer so the low bank evident on the ground may, in parts, mark the line of the original ditch. Although the hillfort has been classified as univallate some writers mention an outer bank. The aerial photographs reveal two additional banks which can be more or less traced on the ground; these provide a multi-enclosure effect. Both shown on the south and west sides, the inner curving in and almost abutting the main enclosure and the outer, now almost gone, is traceable by its ditch. Aerial photographs suggest that both continue in the field to the south-east but only unsurveyable undulations are now visible on the ground (citing Silvester).

Site visit 20th January 1987. The major part of the earthwork has been levelled and the rounded hilltop is regularly ploughed and cultivated. The north-west side, located on the steepest part of the hillslope, comprises a 3.5 metre high scarp with, along its top, a 1.4 metre wide, 0.7 metre high bank. Cropmarks suggest that it was once more substantial and that part has been removed. On the downhillside of the scarp an outer bank is evident; about 0.8 metres high externally and 0.5 metres high internally, it partially overlies a medial ditch. Not apparent trace of an outer ditch. The north-east line of the main rampart is set at quite an angle to its neighbour so it may not in its ploughed down state appear to join up with the extant section. An outer ditch is evident at the foot of this scarp towards the east side of the earthwork where both terminate in a rounded end. Several other features are twin-banked with a medial ditch and perhaps a slight outer ditch; the entrance was either on the south-west or eastern side. The work has been so positioned on the rounded hillslope that the north and south ramparts are not intervisible and dead ground to the south is not really defensible. Its situation, similar to that of the average Cornish Round, suggests a territorial or agricultural role rather than a defensive one.

Schedule Document. Department for Culture, Media and Sport, 2001, Iron Age Hillfort Known as Burleigh Dolts, 280m South East of Burleigh Farm

Large Iron Age multiple enclosure fort, located on a broad spur north of Malborough village. It commands a high and prominent location with wide local views.

The monument survives as a series of three semi-concentric enclosures, partly preserved in later hedgebanks, surrounding a small ovoid central enclosure, now largely levelled. The best preserved rampart of the fort forms the north-west side of this inner enclosure and is univallate. The hillside here drops steeply away but the north-east side slopes gently, while the south and west sides are virtually level. These sides of the fort were defended by the three outworks. The original main entrance appears to have been at the extreme eastern corner of the inner rampart, where the rampart ends turn in slightly. A faint hollow way is visible within this entrance. Another entrance, 110 metres to the north-west is of later date. A hollow way followed by a modern footpath climbs up through it from the north, but the rampart here has no obvious break. A third entrance at the north-west corner of the site has traces of a hornwork below it, projecting from the outer rampart and curving round to the east. Its western part is followed by a later hedgebank.

The rampart on the north-west side of the inner enclosure is about 5 metres wide, rising 0.8 metres from the interior and falling steeply 3.5 metres to the outer ditch. This is 9 metres wide by up to 1 metre high. Elsewhere, the ramparts which survive in later hedgebanks are typically about 2 metres wide, rising from 0.8 metres to 1.5 metres from the interior and falling 1.5 metres to 2.5 metres to the exterior. Of the ploughed ramparts, the outer circuit on the west has a bank 9 metres wide by up to 0.5 metres high, with an outer ditch 7 metres wide and 0.4 metres deep. An upcast bank is 10 metres wide and 0.3 metres high. The intermediate ramparts on the south side are only visible as changes in the level of the field, on average about 0.4 metres high, although their ditches can be seen on aerial photographs.

Within the inner circuit is a brick bunker associated with the use of the site as a radar station during World War II. The bunker, now used as a reservoir, is 9 metres wide by 13 metres long, embanked with earth, and is 3 metres high with a flat concrete roof. Traces of a service road pass along the inside of the former southern rampart to the east side of the site.

Report - Geophysical Survey. Wilkes, E., 2006, Report on Geophysical Survey at Burleigh Dolts, South Devon
Geophysical survey of the area recorded several anomalies of archaeological potential within the monument of Burleigh Dolts. The subsurface remains of the hillfort's ditch circuits appear intact and anomalies which may represent internal features within the enclosure were detected together with features related to more recent, 20th century, use of the site. It was noted that there are some undulations in the field which correspond with significant anomalies in the geophysical survey. In addition several previously unknown archaeological features of possible prehistoric date were also recorded including two possible round houses or barrows, a segmented enclosure and structures within the circuit of the hillfort.

MDV14370	HMS Ramilles	Maritime
Wreck of HMS Ramilles, lost 1760.		

Monument Types and Dates

WRECK ((Between) Post Medieval to XXI - 1540 AD to 2009 AD)

Description and Sources

Description

Migrated Record. Cherry, B.,
Wreck of hms ramilles, lost 1760, located. Two cannon and other finds plotted. Ramilles cove (cherry).

Migrated Record. ELLIOT,
Wrecked in october 1760 hms ramilles struck the rocks a few hundred yards east of bolt tail and speedily went to pieces. 700 were drowned, only 30 saving themselves by climbing the cliffs. The captain had mistaken bolt tail for rame head and thought he was running into plymouth sound (elliot).

Migrated Record. AMD,
Nb. Location ambiguous. Mcdonald describes the site as "east of ramilles cove", but his sketch map suggests a location west of the cove (amd).

Migrated Record. CG, QUOTING BIOGRAPHY OF LORD GRAVES IN NAVAL CHRONICLE, VOL 5, P 397,
2 deck ship of 74 guns lost in hurricane of 17 sep 1782. "ramilles was taken by the lee. Thus was this capital ship. Reduced to a mere wreck" (cg, quoting biography of lord graves in naval chronicle, vol 5, p 397).

Migrated Record. SX4148,
Millard places her off rame head (sx4148) (millard).

Migrated Record. BREEN,
Breen refers to hms ramillies, commanded by admiral graves, lost off w coast of ireland, sep 1782. Cg's reference is presumably also to this ship, rather than hms ramilles (breen).

Migrated Record.

MDV18295	Jebba	Maritime

Mail steamer wrecked near BoltTail in 1907.

Monument Types and Dates

WRECK ((Between) Modern to XXI - 1751 AD to 2009 AD)

Description and Sources

Description

Migrated Record. Behenna, J.,
Built as "albertville", 1896.3813 tons, 352ft long, 44.2ft beam wrecked at whitechurch (behenna).

Migrated Record. ELLIOT,
The mail steamer jebba was wrecked near bolt tail in april 1907. She carried a cargo of rubber, ivory and fruit as well as passengers from the west coast of africa. Nearly all the cargo of the jebba was salvaged (elliott).

Migrated Record.
Jebba, registered london. West africa to plymouth + liverpool in ivory, palm oil + rubber. A 'jebba' class vessel, steel built with two decks. Built by sir raylton dixon and co ltd, middlesbrough, yard no 421 for cie belge maritime du congo as albertville in 1896. Machinery by t richardson and son ltd, 419 nhp, 12 knots. Bought by african steamship co, liverpool and renamed in 1898, also re-registered in london and at 2460 net, 3812 gross. Vessel no.109969. Ran aground in fog. Capt at loss was jic mills. Much of rubber and ivory was salvaged at the time, sold to exploitation and recovery venture for 100. Inquiry no.7065 gives details.

Report - Survey.
Vis=04-apr-1964 only boilers and plate remain.

Report - Survey.
Vis=31-apr-1969 plate located with inscription africa ss company which is from the wreck of the jebba.

Report - Survey.
Vis=13-may-1969 wreckage lies directly out from cave at ramillies cove some 40 feet, more wreckage 150 feet east of position. Wreck broken up, stern still recognisable, boilers intact stern straddles wreck of hms ramillies in position 50 14 20n 003 52 03w bow lies 300 feet away hard against cliff in 8 feet of water, pieces of pottery scattered about due to current.

Report - Survey.
Vis=14-sep-1975 dived on, found wreckage in above position, well broken up, ramillies cove is in 50 14 12n 003 51 54w.

Report - Survey. NMR, CITING HYDROGRAPHIC OFFICE,
Vis=17-dec-1985 much wreckage, double bottoms, girders and boiler remain in general depth 7 to 10m. Lying e/w, about 0.5 miles se of redrot bay and just west of two large caves in the cliffs (nmr, citing hydrographic office).

Remains of a World War II pillbox to the south-west of Outer Hope		

Monument Types and Dates

PILLBOX ((Between) XX - 1901 AD to 2000 AD)

Description and Sources**Description**

Monograph. Wills, H., 1985, Pillboxes. A Study of UK Defences 1940
Wills lists polygonal concrete pillbox facing west at SX677400.

Un-published. Hellis, J., 1990, List of Defensive Sites

Pillbox of local design, (square with corner 'cut' off) loopholes 5/1, 5/2 and 5/3; 5/4 and 5/5 in cliff face. Manned by Black Watch, reference, local history book 'A Present from Hope Cove'.

Worksheet. Jury, R., 1996, Hope Cove Pillbox

Site visited on 31st March 1996. Covers the length of Hope Cove (Sandy Beach) from its north side. Currently at the end of a garden above the beach-back retaining wall. Photographs and plan.

Thurlestone Rock is probably the 'thyrelan stane' referred to in the 9C. It also marks the boundary between the Domesday manors of South Milton & South Huish

Monument Types and Dates

BOUNDARY STONE ((Between) VIII to Late Medieval - 701 AD to 1539 AD)

Evidence DOCUMENTARY EVIDENCE

Description and Sources

Description

Monograph. Gover, J. E. B. + Mawer, A. + Stenton, F. M., 1931, The Place-Names of Devon: Part One
Thurlestone takes its name from the rock on the coast which is pierced by a natural hole.

Article in Serial. Hooke, D., 1990, Studies on Devon Charter Boundaries
Thurlestone Rock. May be the 'Thyrelan Stane' referred to in the South Hams Charter of AD 847.

Report - Interim. Reed, S. J., 1998, Thurlestone Sands
Survey on area of exposed peat conducted by Exeter Archaeology. The southern edge of visible peat deposit was located adjacent to Thurlestone Rock.

Report - Assessment. Dyer, M. J. + Collings, A. G., 1999, Archaeological Assessment and Recording at Homefield Farm, Thurlestone
A distinctive 'thirled' or pierced rock lying offshore to the south of Thurlestone. The Charter of 847 related to a large estate including a substantial part of the South Hams.

Report - Assessment. Blaylock, S. + Neophytou, M., 2004, South Milton Sands & Southdown Farm: Initial archaeological assessment
Thurlestone takes its name from the 'Dyrelan Stane', a distinctive 'thirled' or pierced rock, which lies offshore to the south. South Milton & South Huish are Domesday Manors and the boundary between them follows the stream west from South Huish to Thurlestone Rock.

Article in Serial. Griffith, F. M. + Wilkes, E. M., 2006, The Land Named from the Sea? Coastal Archaeology and Place-names of Bigbury Bay, Devon
Thurlestone was mentioned as a boundary feature in a Charter of AD847. The arch of Thurlestone Rock is visible from the ends of the bay and from at least 3 kilometers out to sea from the west, southwest and east. The name Thurlestone became attached to a manor and a parish and although no longer in Thurlestone parish it still serves as a boundary point of South Milton and South Huish parishes. The rock is important to mariners in identifying the unapproachable stretch of coast to the east.

MDV55655	World War II Pillbox at Thurlestone Sands	Monument

A Second World War pillbox at the southern end of Thurlestone Sands, at Thurlstone Rock. The pillbox is visible on aerial photographs of 1942 onwards and remains in-situ.

Monument Types and Dates

PILLBOX ((Between) World War II - 1939 AD to 1945 AD)

Evidence EXTANT BUILDING

Description and Sources

Description

Aerial Photograph. Royal Air Force, 1942, RAF S762/H70
The pillbox is visible as a low structure adjacent to the Thurlstone Rock hotel.

Aerial Photograph. Royal Air Force, 1946, RAF/CPE/UK/1890
The pillbox is visible as a pale structure.

Worksheet. Jury, R., 1996, South Milton Sands Pillbox
Polygonal concrete pillbox covering Thurlestone (South Milton) Sands.

Personal Comment. Horner, W., 1998,
Pillbox, now painted white, viewed from a distance due to adjacent building works. Hotel apparently being extended up to pillbox. Polygonal. Light machine-gun/rifle loops covering Thurlestone Sands. Faces northwest.

Photograph. Horner, W., 1998, Slides

Report - Assessment. Blaylock, S. + Neophytou, M., 2004, South Milton Sands & Southdown Farm: Initial archaeological assessment

Aerial Photograph. Bluesky International Ltd/Getmapping PLC, 2007, Pan Government Agreement Aerial Photographs
The pillbox is clearly visible as a structure.

Interpretation. Hegarty, C. + Knight, S. + Sims, R., 2013-2014, South Devon Coast Rapid Coastal Zone Assessment Survey National Mapping Programme Project
A Second World War hexagonal pillbox, probably a type 24 or variant thereof, is visible as a structure on aerial photographs of 1942 onwards. The pillbox remains in-situ.

Traces of the southern rampart of the Iron Age Bolt Tail Promontory Fort were recorded in 1995 during erosion repair work		

Monument Types and Dates

RAMPART ((Between) Iron Age - 700 BC to 42 AD)

Evidence DOCUMENTARY EVIDENCE

Description and Sources**Description**

Plan - measured. Royal Commission on the Historical Monuments of England, 1987, Scaled plan of Bolt Tail Promontory Fort showing earthworks. Copy in Parish file.

Report - Watching Brief. Blaylock, S. R., 1996, Footpath Repair and Archaeological Watching Brief, Bolt Tail Promontory Fort, Malborough, Devon, 1995.

Erosion repair work at south end of promontory fort. Later field boundary facing wall added to, erosion scars repaired, stone steps and pathway constructed. Traces of rampart recorded in watching brief.

Schedule Document. Department for Culture, Media and Sport, 2001, Iron Age Cliff Castle Known As Bolt Tail Camp Iron Age cliff castle known as Bolt Tail Camp with a large rampart cutting off the headland. The rampart is now 260 metres long although originally longer. The south end of the rampart is severely eroded but an earthwork bank about 8 metres wide by 2 metres high continues 60 metres along the cliff edge to the south-east. Other details: Monument 33761.

Un-published. Batty, M., 2003, South Devon Coast Path Project: a study of the archaeology along the coast path in the South Hams from Staddon Heights to Sharkham Point Visited in 2003.

HER Monument ID	Site Name	Record Type
MDV63614	Barrows above cliffs at Ramillies, Hope	Monument

Three bowl and one bell barrow on the crest of a rocky promontory forming part of a barrow cemetery.

Monument Types and Dates

BARROW ((Between) Bronze Age - 2200 BC to 701 BC)

Description and Sources**Description**

Report - Survey. Ancient Monuments,
Vis=est -/-/2000 (ancient monuments) 4 barrows 470m sw of hope cove, forming part of a round barrow cemetery.

Migrated Record. AM,

Three bowl + one bell barrow on the crest of a rocky promontory. Closely spaced with their outer ditches touching one another. The bell barrow lies on the n side of the group. This survives as a central cairn off small stones 32m in diam, up to 1m high; surrounding berm between 4m and 11m wide falls up to 0.7m into the ditch, which is 7m wide and 0.2-0.4m deep. The outer ditch + berm have been disturbed on sw side by construction of a bowl barrow comprising a mound of small stones + earth, 26m diam and up to 1m high with ditch 5m wide, up to 0.2m deep. To s, its outer ditch touches that of a second bowl barrow, whose stony mound is 20m in diam, up to 0.5m high. This has been robbed, resulting in uneven surface. A third bowl barrow lies a short distance to e. This is larger, with earthen mound 36m diam, up to 1.5m high. Its ditch is 7m wide, up to 0.2m deep. An upcast bank 8m wide survives to 0.7m high on e side and touches the outer ditch of the bell barrow to its n (am).

Migrated Record.

Evidence EARTHWORK

BARROW ((Between) Bronze Age - 2200 BC to 701 BC)

Description and Sources

Description

Report - Survey. Ancient Monuments,

Vis=est -/-/2000 (ancient monuments) 5 round barrows 570m s of hope cove, forming part of a round barrow cemetery.

Migrated Record. AM,

A loose cluster in a rough nw-se alignment, the 3 to the n being in close proximity. The nw barrow is 25m in diam, and survives up to 0.8m high. To e of these is a third barrow 21m in diam, up to 1.2m high, while 63m to its se is a fourth barrow, 36m diam, up to 0.9m high. A fifth barrow 66m to w is sited on a natural rise and is 16m diam, up to 0.3m high. Ditches survive as buried features (am).

Migrated Record.

Des=ancient monuments/(-/-/2000)/as above.

Cartographic. Environment Agency, 2007, LiDAR data JPEG image (1 metre resolution)

Three or four possible mounds are identifiable.

Interpretation. Hegarty, C. + Knight, S. + Sims, R., 2013-2014, South Devon Coast Rapid Coastal Zone Assessment Survey National Mapping Programme Project

The mounds recorded by the above authority are not clearly identifiable on the aerial photographs available to the survey.

Three or four low and irregularly shaped mounds are identifiable on images derived from Lidar data acquired in 2007, but do not appear convincingly archaeological in character. It is possible the mounds are geological in origin.

WRECK (Unknown date)

Evidence SUBMERGED MONUMENT

Description and Sources

Description

Website. McDonald, K., 2004, A Diver's Guide to the Shipwrecks of Bigbury Bay

The 'Chanteloupe' was wrecked at the base of Thurlestone Rock in September 1772. Remains consist of a few cannon, musket and pistol shot. Local diver, Neville Oldham, raised one of the cannon, which can be seen on the green opposite Thurlestone Church. The 'Chanteloupe' was sailing from Grenada in the West Indies to London with a cargo of rum, sugar, coffee and Madeira wine.

Personal Comment. Glover, F., 2005,

Some argument as to its position; either located at Bantham or at Thurlestone Rock (See PRN 18298).

HER Monument ID	Site Name	Record Type
MDV74105	Broadway Cottage, Galmpton	Monument

18th century cottage of rendered rubble walls under a thatch roof with 19th and 20th century additions. Two room cross passage plan with original roof structure.

Monument Types and Dates

COTTAGE NON SPECIFIC ((Between) Post Medieval to XVIII - 1540 AD to 1800 AD)

Description and Sources

Description

List of Blds of Arch or Historic Interest. Department of Environment, 1990, South Huish

Broadway Cottage. Probably C18 extended in C19. Rendered rubble walls. Gable ended thatch roof, with stone coping at right-hand end. Brick stack at each gable end.

Plan: 2-room plan, roughly equal-sized, both heated by an end stack. C19 addition at left-hand end.

Exterior: 2 storeys. Roadside elevation has a C19 plank door at the centre with an early C19 16-pane hornless sash to its left on the ground floor and a later C19 4-pane sash in the single storey addition at the left-hand end. The rear elevation has mid C20 diamond leaded pane casements and a large C20 conservatory.

Interior: inaccessible at time of survey. Other details: LBS 100784.

Correspondence. English Heritage, 2007, Broadway Cottage, South Huish, South Hams, Devon

English Heritage currently processing an application to remove the above building from the list. Other details: Colour photos.

Correspondence. English Heritage, 2008, Broadway Cottage, South Huish, South Hams, Devon

Broadway Cottage not to be removed from List of Buildings of Special Architectural or Historic Interest for the following reasons: the 18th century cottage survives largely intact and its two room cross passage plan remains legible, the cottage retains its 18th century roof structure of A frame trusses, the 19th and 20th century additions are not of special interest but do not significantly detract from the 18th century cottage which remains readable as a single dwelling.

List of Blds of Arch or Historic Interest. Department for Culture, Media and Sport, 2008, South Huish

Updated listing description for Broadway Cottage.

18th century cottage. Single storey 19th century extension and 20th century addition to east.

Materials: Rendered rubble stone with thatch to roof. Brick stack at each gable. 19th century extension has slate roof. 20th century addition has a corrugated asbestos roof.

Plan: One and a half storey cottage with a two room plan with cross passage to ground floor. Single room 19th century extension to the east.

Exterior: The roadside elevation (north) is single storey with a central 19th century plank door with an early 19th century sixteen pane hornless sash to its left. The 19th century extension projects forward and includes a late 19th century four pane sash window. The 20th century addition continues to the east. The gable end to the west has stone coping and includes three 20th century windows. The south elevation is one and a half storeys with a central 20th century door at ground floor with a 20th century casement window either side. There is a 20th century casement window to the first floor. To the east is the 19th century extension with a door and 20th century casement window. There is a large 20th century conservatory to this elevation. A single storey 20th century addition is built against the 19th century extension and is used as a garage. This addition is not of special interest.

Interior: Two room plan with cross passage. Doorway inserted into the substantial 18th century wall at east end to provide access to the 19th century extension. Staircase to north west corner of 18th century house. Principal rafters to upper floor and survival of A frame trusses to roof.

Reasons for designation decision: The 18th century cottage survives largely intact and its two room cross passage plan remains legible, the cottage retains its 18th century roof structure of A frame trusses, the 19th and 20th century additions are not of special interest but do not significantly detract from the 18th century cottage which remains readable as a single dwelling.

MDV74481	K6 Telephone Box off the Square, Inner Hope	Building
----------	---	----------

K6 telephone box situated off the Square at Inner Hope. Of cast iron and glass, the K6 was introduced in 1935 to celebrate the silver jubilee of King George V. It was designed by Sir Giles Gilbert Scott.

Monument Types and Dates

TELEPHONE BOX ((Between) XX - 1901 AD to 2000 AD)

Evidence EXTANT BUILDING

Description and Sources**Description**

List of Blds of Arch or Historic Interest. Department for Culture, Media and Sport, 2008, South Huish

K6 telephone box located off The Square at Inner Hope.

Materials: Cast iron and glass.

Plan: Square in plan.

Exterior: The kiosk has three glazed sides, including a door, and a solid rear side. The Soane-inspired domed roof sits atop four arched sides, each of which has a crown in relief above a glazed panel bearing the word 'TELEPHONE'. Painted red.

Interior: Contains modern telecommunications equipment.

History: The K6 was introduced in 1935 to celebrate the silver jubilee of King George V and is commonly known as the Jubilee Kiosk. It was designed by Sir Giles Gilbert Scott as a development of his earlier K" design of 1924.

Reasons of designation: The K6 is an iconic example of industrial design, showing Sir Giles Gilbert's Scott's adaptation of neoclassical forms, influenced by the work of the Regency architect, Sir John Soane, for a modern technological function.

This particular kiosk is a good example of the type, situated at the heart of the Inner Hope Conservation Area and with visual relationships to other, nearby listed buildings.

Small rectangular building shown at Bolt Tail, on west side of path from Redrot Cove. Map object based on this Source.

Report - Survey. Thackray, C., 1990, Archaeological Survey of the Salcombe Estuary: West (Bolt Head to Bolt Tail and Snapes Point) Devon

This small, rectangular construction of concrete and wood was in a poor condition on a site visit in 1989, and was likely to deteriorate further. It was subsequently demolished and the area covered by the foundations was infilled and reseeded.

Cartographic. Ordnance Survey, 2010, MasterMap

Description and Sources

Description

Aerial Photograph. Royal Air Force, 1945, RAF/106G/UK/967

A rectangular structure is visible

Interpretation. Hegarty, C. + Knight, S. + Sims, R., 2013-2014, South Devon Coast Rapid Coastal Zone Assessment Survey National Mapping Programme Project

A small rectangular structure of probable Second World War date and military function is visible on aerial photographs of the 1940s, overlooking the coast at Gray Stone, south of Inner Hope. The precise function of the structure is unknown but the shadow of a possible aerial or mast immediately to the east of the structure might support the interpretation of a communications role. It might be a successor to the Lookout House depicted on the Ordnance Survey first and second edition 25 inch maps, recorded separately. It is not visible on the later images available to the survey and was probably demolished after the war.

A bomb crater of Second World War date is visible as a circular earthwork pit on aerial photographs of 1945.

Monument Types and Dates

BOMB CRATER ((Between) World War II - 1939 AD to 1945 AD)

Evidence LEVELLED EARTHWORK

Description and Sources

Description

Aerial Photograph. Royal Air Force, 1945, RAF/106G/UK/967
A circular earthwork pit circa 12 metres in diameter is visible.

Interpretation. Hegarty, C. + Knight, S. + Sims, R., 2013-2014, South Devon Coast Rapid Coastal Zone Assessment Survey National Mapping Programme Project

A circular pit visible as an earthwork on aerial photographs of 1945 is probably a bomb crater of Second World War date. The crater was infilled in the years following the war and is not now visible as an earthwork.

HER Monument ID	Site Name	Record Type
MDV104321	Catch Meadow West of Hope Barton Farm	Monument

A possible catch meadow of probable nineteenth or twentieth century date is visible on aerial photographs of the 1940s as the remains of roughly parallel earthwork ditches following the contours of the south-west facing slopes of a combe west of Hope Barton Farm. Catch meadows are usually found on combe or hill slopes and are designed to irrigate pasture by diverting water from a spring or stream and passing it along the slope via a series of roughly parallel channels or gutters. When irrigation was required the gutters were blocked, causing water to overflow from gutter to gutter, thereby irrigating the slopes below.

Monument Types and Dates

CATCH MEADOW ((Between) XIX to Late 20th Century - 1801 AD to 2000 AD)

Evidence EARTHWORK

Description and Sources

Description

Aerial Photograph. Royal Air Force, 1945, RAF/106G/UK/967

The remains of three gutters are visible as fragmentary linear earthworks.

Aerial Photograph. Bluesky International Ltd/Getmapping PLC, 2007, Pan Government Agreement Aerial Photographs

The gutters remain visible as fragmentary earthworks, albeit eroded and levelled in part.

Interpretation. Hegarty, C. + Knight, S. + Sims, R., 2013-2014, South Devon Coast Rapid Coastal Zone Assessment Survey National Mapping Programme Project

A possible catch meadow of probable nineteenth or twentieth century date is visible on aerial photographs of 1945 as the remains of parallel earthwork ditches roughly following the contours along the north-west facing slopes of a combe west of Hope Barton Farm. Most catch meadow systems are believed to date to the post medieval period, although it is likely that they were first developed in the medieval period and continued in use into the twentieth century. Catch meadows provided a simple, inexpensive and effective form of irrigation. When irrigation was required water was diverted from a source such as a pond, river, spring or spring-fed stream and passed along the meadow slopes via one or more of the gutters, which was then caused to overflow. In this instance the system probably tapped Hey Brook. The lower, roughly parallel gutters then 'caught' and redistributed water passing it evenly over the surface of a meadow below. The gently flowing water prevented the ground freezing in winter and encouraged early growth in spring, thereby providing extra feed for livestock, particularly important during the hungry gap of the March and April.

The gutters are possibly visible as slight and fragmentary earthworks on digital images derived from aerial photographs taken in 2007. Field investigation is required to ascertain the current condition of the earthworks.

Description

Aerial Photograph. Royal Air Force, 1945, RAF/106G/UK/967
Four earthwork pits are visible. Map object partly based on this source.

Aerial Photograph. Bluesky International Ltd/Getmapping PLC, 2007, Pan Government Agreement Aerial Photographs
The four earthwork pits remain visible. Some appear to have been modified.

Cartographic. Environment Agency, 2007, LiDAR data JPEG image (1 metre resolution)
The four earthwork pits remain visible. Some appear to have been modified. Map object partly based on this source.

Interpretation. Hegarty, C. + Knight, S. + Sims, R., 2013-2014, South Devon Coast Rapid Coastal Zone Assessment Survey
National Mapping Programme Project

Four possible small quarry pits of probable modern date are visible as earthworks on aerial photographs of the 1940s onwards, on the steep coastal slopes above the coastal cliffs to the south of Inner Hope. Two of the pits appear to target low mounds identified as possible round barrows of Bronze Age date. At least one pit appears to have been enlarged between 1945 and 2007.

MDV104343	Field Boundary Banks, South of Inner Hope	Monument

Linear earthwork banks visible on aerial photographs of 1945 overlooking Inner Hope from the south might be the remains of field boundaries of medieval date. Field investigation is required to fully assess their character and survival.

Monument Types and Dates

FIELD BOUNDARY ((Between) Medieval - 1066 AD to 1539 AD)

Evidence EARTHWORK

Description and Sources

Description

Cartographic. Ordnance Survey, 1880-1899, First Edition Ordnance 25 inch map

The visible banks do not correspond with any depicted boundaries but the area in which they are located is depicted as rough ground.

Aerial Photograph. Royal Air Force, 1945, RAF/106G/UK/967

Linear low earthwork banks are visible. Map object based on this source.

Interpretation. Hegarty, C. + Knight, S. + Sims, R., 2013-2014, South Devon Coast Rapid Coastal Zone Assessment Survey National Mapping Programme Project

Linear earthwork banks visible on aerial photographs of 1945 to the south of Inner Hope might be the remains of field boundaries of medieval date. The earthworks are located on the upper slopes of a steeply sided spur overlooking thecombe in which Inner Hope is located, in areas depicted as rough ground on the Ordnance Survey first edition 25 inch map. The banks might have survived into the twentieth century due to their agriculturally marginal location. They cannot be clearly seen on later aerial photographs but field investigation is required to fully assess their character and survival.

Description and Sources

Description

Post-Graduate Thesis. Walls, S., 2010, The Materiality of Remembrance: Twentieth Century War Memorials in Devon One of two external tablets, which commemorate the Second World War, to have been erected on or near churchyard boundaries. These two examples can be viewed to have been erected externally as a reaction to the lack of an external First World War memorial in either parish, suggesting that the existing internal locations chosen for First World War memorials, were no longer deemed appropriate for the remembrance of the Second World War.

HER Monument ID	Site Name	Record Type
MDV111496	Field System East of Thurlestone Sands	Monument

Five elongated rectangular fields are depicted to the east of Thurlestone Sands on the 19th century Tithe Map and may represent the remains of a fossilised medieval strip field system.

Monument Types and Dates

FIELD SYSTEM ((Between) Medieval - 1066 AD to 1539 AD)

Evidence DOCUMENTARY EVIDENCE

Description and Sources

Description

Cartographic. Devon County Council, 1838-1848, Tithe Mosaic, approximately 1838-1848
A group of narrow elongated fields are depicted. Map object based on this source.

Cartographic. Ordnance Survey, 1880-1899, First Edition Ordnance 25 inch map
Many of the field boundaries have been removed and the area is shown as marshland and labelled as 'Liable to Floods.'

Cartographic. Ordnance Survey, 1904 - 1906, Second Edition Ordnance Survey 25 inch Map
The area is shown as marshland and labelled as 'Liable to Floods.'

Interpretation. Pink, F., 2014, South Devon Coast Rapid Coastal Zone Assessment Survey Desk-Based Assessment
On the South Huish Tithe Map of 1842 there are five elongated rectangular fields illustrated to the east of Thurlestone Sands. They are orientated on a north to south axis, recorded as Plots 90, 113, 334, 156 and 484 and described variably as pasture, arable and orchard. Given their shape and form it is possible that they represent a remnant fossilised medieval strip field system. On the First and Second Edition 25 inch Ordnance Survey maps (c.1880s & 1904-6) this area is illustrated as rough ground and labelled 'Liable to Floods'. On the Ordnance Survey Master Map a number of north to south drains are labelled, which in part, respect former tithe field boundaries.

Cartographic. Ordnance Survey, 2015, MasterMap
A series of north-south aligned drains are labelled and depicted. Map object based on this source.

The possible location of a bowling green is indicated by three field names on the 19th century Tithe Map.

Monument Types and Dates

FIELD NAME (Unknown date)

Evidence DOCUMENTARY EVIDENCE

Description and Sources

Description

Website. Devon County Council, 1838-1848, Tithe Maps and Apportionments

Plots 725, 726 and 727 are recorded as 'Bowling Green' within the South Milton Tithe Apportionment. Map object based on this source.

Interpretation. Pink, F., 2014, South Devon Coast Rapid Coastal Zone Assessment Survey Desk-Based Assessment
Plots 725, 726 and 727 on the South Milton Tithe Map of 1843 are recorded as 'Bowling Green' within the Tithe Apportionment. The field names indicate that the land may have been used as a bowling green, or may simply refer to the flat topography of the field.
